

What is Snap-On Smile?

Snap-On Smile was invented by a dentist who realized that not everyone can afford many thousands of dollars to get a Hollywood smile make-over.

Snap-on Smile's unique, proprietary formulas of hi-tech dental resin make it very thin yet extremely strong. It fits right over your own teeth to give you a beautiful, natural looking smile—even if you have stains, chips, gaps or missing teeth.

And for many people, Snap-On Smile can be life changing. It gives back the confidence to smile. Thousands of people worldwide have already experienced the unique benefits of Snap-On Smile.

During your first visit to the Snap-On Smile dentist determines if you are a candidate. If so, an impression is taken of your existing teeth. Don't worry... there is no pain, no shots and no drilling involved! Since each Snap-On Smile is custom made, the dentist will send your impression to the studio to have yours made just for you.

Then, three weeks later your Snap-On Smile is custom fitted. That's it, you're done. No shots, no drilling, no pain. You'll then be shown how to pop your new smile in and out, plus how to keep it looking good.

Remember, you can eat with it, drink with it, and wear it all day every day. (Just remove it when you sleep).

How long will my Snap-On Smile last? Snap-On Smile comes with a 1 year warranty and, with proper care, your Snap-On Smile can last 2 to 5 years. Just follow the Snap-On Smile dentist's cleaning instructions and you'll enjoy millions of smiles with Snap-On Smile...

How much does Snap-On Smile cost?

Snap on smile cost a fraction of the price of things like veneers, crowns & bridges. Snap-On Smile is the only removable, affordable alternative to traditional smile make-over solutions.

A Temporary Smile Design

The Snap-on Smile is a temporary smile design, made out of acrylic that snaps over your natural teeth.

It can be used for special events, such as weddings or graduations, or it can be used to "try on" a smile design to see if it works.

How a Snap-on Smile Is Made

This product is made by Den-Mat, a dental materials company and laboratory in California. It is made out of a crystallized acetyl resin that is fairly flexible and durable.

Den-Mat is saying that it is tough enough to eat with it, and that it will last about four years. Dr. Marc Liechtung, the dentist who invented this product, has his own Snap-on Smile he has used for five years.

Maintenance and Cleaning

Keeping this appliance clean is a simple matter of taking it out to brush and floss, and then putting it back in.

The material is tough enough that patients can eat with this in the mouth. Be careful if you do this, though. The appliance will trap plaque and food particles and this can promote serious decay problems. This will hurt your teeth, of course, and also it will be annoying. Every time you eat anything, even if it is only a single potato chip, I recommend that you excuse yourself to a rest room, take the appliance out, swish, and put it back in.

Snap-on Smile Pictures

As you can see from these pictures, the result looks natural, and this product can be used for a variety of situations. Here is a smile where the teeth are uneven and a little dark looking. The result is natural-looking and attractive:

Below is another case of what we would call "peg laterals", where the permanent teeth are malformed, leaving the impression that there are missing teeth:
